

Living things and their habitats – Knowledge Organiser Year 2 Spring 2		
VOCABULARY		<b><u>Microhabitats</u></b>
Microhabitat	A very small habitat within a larger habitat.	<p>A microhabitat is different to the larger habitat that surrounds it which makes it suited to particular plants and animals.</p>  <p>The underside of this log provides damp and dark conditions for a woodlouse to live in. Moss likes to grow on the log.</p>
Living	They need air, food and water. They grow.	
No longer living	They were once living.	
Never lived	They have never been living.	
<b><u>Ocean habitat</u></b>		<b><u>Rainforest habitat</u></b>
<p>Oceans provide water for animals and plants to live in. Dolphins live in water. They eat the smaller fish that also live in the ocean. Seaweed grows in the water.</p> 		<p>Rainforests provide the right conditions for many different animals and plants to live in. For example, Macaw parrots build a nest in the trees. They eat the many different insects, seeds and nuts that are found there.</p> 
		<p><b><u>Living, no longer living, never lived</u></b></p>  <p>A strawberry plant is living because it needs air, food and water to survive. Also, it grows.</p>  <p>A log was once part of a living tree but it is not anymore. It is no longer living.</p>  <p>A rock has never lived. It does not need air, water or food. It does not grow.</p>
